

Where are the parathyroid glands located in the body

- A. Abdomen
- B. Neck
- C. Chest
- D. Head

What is the main function of the parathyroid glands

- A. Produce adrenaline
- B. Aid in digestion
- C. Produce insulin
- D. Regulate calcium levels

How many parathyroid glands are typically found in the human body

- A. 6
- B. 4
- C. 8
- D. 2

What hormone do the parathyroid glands produce

- A. Thyroxine
- B. Insulin
- C. Estrogen
- D. Parathyroid hormone

What is the role of parathyroid hormone in the body

- A. Helps with muscle growth

- B. Regulates calcium levels in the blood
- C. Aids in digestion
- D. Controls blood sugar levels

What is hyperparathyroidism

- A. Overactivity of the parathyroid glands
- B. A type of thyroid cancer
- C. A condition caused by low calcium levels
- D. Underactivity of the parathyroid glands

What is hypoparathyroidism

- A. A condition caused by overactive parathyroid glands
- B. Low levels of parathyroid hormone
- C. High levels of parathyroid hormone
- D. An excess of thyroid hormone

What is the impact of parathyroid hormone on calcium levels in the blood

- A. Decreases calcium levels
- B. Causes calcium levels to fluctuate
- C. Increases calcium levels
- D. No impact on calcium levels

What is the relationship between the parathyroid glands and the thyroid gland

- A. They produce the same hormones.
- B. Parathyroid glands regulate calcium levels, while thyroid gland regulates metabolism.
- C. Thyroid gland is a part of the parathyroid glands.
- D. They have no relationship.

How is parathyroid hormone regulated in the body

- A. Through the thyroid gland
- B. By negative feedback
- C. By positive feedback
- D. By the adrenal glands

What conditions can affect the function of the parathyroid glands

- A. Diabetes
- B. Hypothyroidism
- C. Hyperparathyroidism
- D. High cholesterol

What are the symptoms of a parathyroid disorder

- A. Nausea, hair loss, weight gain
- B. Hypocalcemia, headache, muscle weakness
- C. Hypercalcemia, fatigue, bone pain
- D. High blood pressure, joint swelling, vision changes

How is a parathyroid disorder diagnosed

- A. Physical exam
- B. X-ray
- C. Blood tests
- D. MRI

What treatments are available for parathyroid disorders

- A. Surgery

- B. Acupuncture
- C. Medication
- D. Physical therapy

What is the surgical procedure used to remove a parathyroid gland

- A. Thyroidectomy
- B. Adrenalectomy
- C. Parathyroidectomy
- D. Parotidectomy

Can parathyroid disorders be hereditary

- A. Not sure
- B. Yes
- C. Maybe
- D. No

What is the role of vitamin D in relation to the parathyroid glands

- A. Aids in digestion
- B. Produces insulin
- C. Regulates blood pressure
- D. Regulates calcium levels

How does parathyroid hormone affect bone health

- A. Increases calcium release from bones
- B. Promotes bone growth
- C. Has no effect on bone health
- D. Decreases calcium release from bones

What are the potential complications of untreated parathyroid disorders

- A. Kidney stones
- B. Bone fractures
- C. Thyroid issues
- D. Heart disease

How can lifestyle choices impact the health of the parathyroid glands

- A. By wearing sunscreen
- B. By getting regular dental check-ups
- C. Diet and exercise can affect parathyroid health
- D. By avoiding caffeine
