

What is the primary function of the lymphatic system

- A. Transporting oxygen
- B. Digesting food
- C. Immune response
- D. Regulating body temperature

Answer: C. Immune response

What is the name of the fluid that circulates through the lymphatic system

- A. Lymph
- B. Blood
- C. Saliva
- D. Plasma

Answer: A. Lymph

What is the role of lymph nodes in the lymphatic system

- A. Produce lymph fluid
- B. Digest food
- C. Filter and trap foreign particles and cancer cells
- D. Regulate blood pressure

Answer: C. Filter and trap foreign particles and cancer cells

What is the term for the swelling of lymph nodes due to an infection

- A. lymphadenopathy

- B. lymphedema
- C. lymphoma
- D. lymphocytosis

Answer: A. lymphadenopathy

What is lymphedema and what causes it

- A. Lymphedema is swelling due to fluid build-up in the lymphatic system.
- B. Lymphedema is caused by allergies.
- C. Lymphedema is caused by a virus.
- D. Lymphedema is caused by high blood pressure.

Answer: A. Lymphedema is swelling due to fluid build-up in the lymphatic system.

What is the most common type of lymphatic system cancer

- A. Leukemia
- B. Multiple myeloma
- C. Hodgkin's lymphoma
- D. Non-Hodgkin's lymphoma

Answer: D. Non-Hodgkin's lymphoma

What are the symptoms of lymphoma

- A. Headache
- B. Enlarged lymph nodes
- C. Cough
- D. Runny nose

Answer: B. Enlarged lymph nodes

What is the difference between Hodgkin's lymphoma and non-Hodgkin's lymphoma

- A. Prognosis
- B. Treatment options
- C. Age of onset
- D. Presence of Reed-Sternberg cells

Answer: D. Presence of Reed-Sternberg cells

What is the treatment for lymphatic system disorders such as lymphoma

- A. Antibiotics
- B. Surgery
- C. Chemotherapy
- D. Physical therapy

Answer: C. Chemotherapy

What is the function of the spleen in the lymphatic system

- A. Filtering blood and removing old or damaged red blood cells
- B. Producing white blood cells
- C. Storing excess glucose
- D. Regulating body temperature

Answer: A. Filtering blood and removing old or damaged red blood cells

What is the difference between primary and secondary lymphedema

- A. Secondary lymphedema is a result of genetics.
- B. Primary lymphedema is caused by an injury.
- C. Primary lymphedema is congenital, while secondary lymphedema is acquired.
- D. Primary lymphedema is temporary.

Answer: C. Primary lymphedema is congenital, while secondary lymphedema is acquired.

What is the cause of lymphangitis

- A. Bacterial infection
- B. Parasitic infection
- C. Viral infection
- D. Fungal infection

Answer: A. Bacterial infection

What are the symptoms of lymphangitis

- A. Swollen lymph nodes
- B. Fever and chills
- C. Cough and congestion
- D. Red streaks on skin

Answer: D. Red streaks on skin

What is the treatment for lymphangitis

- A. Physical therapy

- B. Home remedies
- C. Surgery
- D. Antibiotics

Answer: D. Antibiotics

What is the role of the thymus in the lymphatic system

- A. Filters lymph
- B. Stores excess lymph
- C. Produces T cells
- D. Produces B cells

Answer: C. Produces T cells

What is the difference between lymphadenopathy and lymphadenitis

- A. Lymphadenopathy is painful, lymphadenitis is painless
- B. Lymphadenopathy is enlarged lymph nodes without infection, lymphadenitis is swollen lymph nodes due to infection
- C. Lymphadenopathy and lymphadenitis are the same thing
- D. Lymphadenopathy is caused by infection, lymphadenitis is not

Answer: B. Lymphadenopathy is enlarged lymph nodes without infection, lymphadenitis is swollen

What is the role of the tonsils in the lymphatic system

- A. Digesting food
- B. Regulating body temperature
- C. Producing red blood cells

- D. Helping to trap and fight off bacteria and viruses

Answer: D. Helping to trap and fight off bacteria and viruses

What is the cause of Castleman disease

- A. Viral infection
- B. Genetic mutation
- C. Environmental factors
- D. Unknown

Answer: D. Unknown

What are the symptoms of Castleman disease

- A. Cough, headache, rash
- B. Joint pain, nausea, dizziness
- C. Enlarged lymph nodes, fever, fatigue
- D. Shortness of breath, blurry vision, muscle weakness

Answer: C. Enlarged lymph nodes, fever, fatigue

What is the treatment for Castleman disease

- A. Chemotherapy
- B. Radiation therapy
- C. Surgery
- D. Stem cell transplant

Answer: C. Surgery
