

What is the most common neurological disease

- A. Parkinson's disease
- B. Alzheimer's disease
- C. Multiple sclerosis
- D. Epilepsy

What is the main symptom of Parkinson's disease

- A. Tremors
- B. Memory loss
- C. Blurred vision
- D. Muscle weakness

What is the difference between Alzheimer's disease and dementia

- A. Alzheimer's only affects memory
- B. They are the same thing
- C. Dementia is reversible, Alzheimer's is not
- D. Alzheimer's is a type of dementia

What is the primary cause of multiple sclerosis

- A. Environmental factors
- B. Virus
- C. Genetics
- D. Autoimmune response

What is the treatment for epilepsy

- A. Surgery

- B. Physical therapy
- C. Antiepileptic medications
- D. Herbal remedies

What is the main characteristic of Lou Gehrig's disease

- A. Vision impairment
- B. Progressive degeneration of motor neurons
- C. Memory loss
- D. Digestive issues

What is the difference between a stroke and a TIA (transient ischemic attack)

- A. TIA and stroke are the same thing.
- B. TIA is temporary with no permanent damage, while a stroke causes permanent damage.
- C. TIA and stroke both cause permanent damage.
- D. TIA is more severe than a stroke.

What is the main symptom of Huntington's disease

- A. Involuntary movements
- B. Memory loss
- C. Blurred vision
- D. Muscle weakness

What is the cause of migraines

- A. Dehydration
- B. Genetic factors
- C. Stress
- D. Weather changes

What is the difference between ALS (amyotrophic lateral sclerosis) and MS (multiple sclerosis)

- A. ALS only affects women, while MS only affects men.
- B. ALS and MS are the same disease.
- C. ALS affects motor neurons, while MS affects the central nervous system.
- D. ALS is caused by a virus, while MS is genetic.

What is the main symptom of Guillain-Barre syndrome

- A. fever
- B. joint pain
- C. headache
- D. muscle weakness

What is the main cause of Bell's palsy

- A. Inflammation of facial nerves
- B. Excessive stress
- C. Brain tumor
- D. Genetic factors

What is the main symptom of narcolepsy

- A. Hallucinations
- B. Excessive daytime sleepiness
- C. Memory loss
- D. Insomnia
