

What is the primary male sex hormone

- A. Progesterone
- B. Testosterone
- C. Cortisol
- D. Estrogen

Where are sperm produced in the male reproductive system

- A. Testes
- B. Penis
- C. Prostate
- D. Epididymis

What is the function of the epididymis

- A. Stores urine
- B. Sperm maturation
- C. Filters blood
- D. Produces testosterone

What is the purpose of the prostate gland

- A. Regulates body temperature
- B. Produces urine
- C. Produces fluid that protects and nourishes sperm
- D. Aids in digestion

What is the function of the vas deferens

- A. Produce hormones

- B. Transport sperm from testes to urethra
- C. Regulate blood pressure
- D. Digestion of food

What is the name of the tube that carries sperm from the testes to the urethra

- A. Vas deferens
- B. Sperm tube
- C. Urethral duct
- D. Testicular tube

What is the purpose of the seminal vesicles

- A. Produce and store fluid that mixes with sperm to create semen
- B. Regulate blood sugar levels
- C. Produce testosterone
- D. Aid in digestion

What is the function of the bulbourethral glands

- A. Produce pre-ejaculate fluid
- B. Regulate testosterone levels
- C. Produce urine
- D. Produce sperm

What is the name of the male sex cell

- A. Uterus
- B. Sperm
- C. Ovary
- D. Egg

What is the term for the process of sperm production

- A. Spermiation
- B. Oogenesis
- C. Spermatogenesis
- D. Fertilization

What is the average sperm count in a healthy male

- A. 1 million sperm per milliliter
- B. 30 million sperm per milliliter
- C. 15 million sperm per milliliter
- D. 5 million sperm per milliliter

What is the name of the male reproductive organ that releases urine and semen

- A. Prostate
- B. Penis
- C. Testicle
- D. Scrotum

What is the purpose of the scrotum

- A. To produce sperm
- B. To store urine
- C. To protect the penis
- D. To regulate the temperature of the testes

What is the name of the tube that carries urine from the bladder out of the body

- A. Bladder tube

- B. Urine duct
- C. Pee pipe
- D. Urethra

What is the function of the Cowper's glands

- A. produce milk
- B. digest food
- C. regulate body temperature
- D. secrete pre-ejaculatory fluid

What is the name of the hormone that stimulates the production of sperm

- A. Insulin
- B. Progesterone
- C. Estrogen
- D. Testosterone

What is the purpose of the cremaster muscle

- A. To aid in digestion
- B. To regulate the position of the testes
- C. To control blood flow
- D. To help with breathing

What is the name of the surgery that sterilizes a male by cutting or blocking the vas

- A. Vasectomy
- B. Laminectomy
- C. Hysterectomy
- D. Appendectomy

What is the term for the release of sperm from the penis during ejaculation

- A. Semen expulsion
- B. Sperm release
- C. Ejaculation
- D. Penis release

What is the name of the process where sperm mature and become motile in the epididymis

- A. Epididymal maturation
- B. Sperm production
- C. Spermiogenesis
- D. Sperm activation
