- A. Trapezium
- B. Hamate
- C. Scaphoid
- D. Lunate

Which carpal bone is shaped like a boat

- A. Scaphoid
- B. Capitate
- C. Hamate
- D. Trapezium

Which carpal bone is the most commonly dislocated in the wrist

- A. Scaphoid
- B. Hamate
- C. Lunate
- D. Triquetrum

Which carpal bone is located on the pinky side of the wrist

- A. Scaphoid
- B. Radial
- C. Ulnar
- D. Lunate

Which carpal bone forms the base of the thumb

- A. Hamate
- B. Lunate
- C. Trapezium
- D. Scaphoid

Which carpal bone is shaped like a pea

- A. Scaphoid
- B. Trapezium
- C. Lunate
- D. Pisiform

Which carpal bone is known as the "greater multangular"

- A. trapezium
- B. scaphoid
- C. pisiform
- D. hamate

Which carpal bone is located between the trapezium and capitate

- A. Lunate
- B. Scaphoid
- C. Hamate
- D. Trapezoid

Which carpal bone has a tubercle for the attachment of ligaments

- A. Scaphoid

- B. Triquetrum
- C. Lunate
- D. Trapezium

Which carpal bone has a prominent styloid process

- A. Hamate
- B. Trapezium
- C. Radius
- D. Scaphoid

Which carpal bone is commonly referred to as the "trapezoid"

- A. Hamate
- B. Capitate
- C. Trapezoid
- D. Scaphoid

Which carpal bone is located distal to the scaphoid

- A. Lunate
- B. Trapezium
- C. Hamate
- D. Capitate

Which carpal bone articulates with the metacarpals

- A. hamate
- B. lunate
- C. scaphoid
- D. trapezium

Which carpal bone is commonly fractured in athletes

- A. Lunate
- B. Trapezium
- C. Hamate
- D. Scaphoid

Which carpal bone is located at the base of the index finger

- A. pisiform
- B. trapezium
- C. hamate
- D. lunate
